Art Unit: 2834

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Hydrodynamic spindle motor using welding sealing technique.

Drawings

- 2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the journal bearing, first fluid thrust bearing and the second fluid thrust bearing must be shown or the feature(s) canceled from the claim(s). No new matter should be entered. See MPEP 608.02 (d) and 608.02 (e).
- 3. The drawings are objected to under 37 CFR 1.83(b) because they are incomplete. 37 CFR 1.83(b) reads as follows:

When the invention consists of an improvement on an old machine the drawing must when possible exhibit, in one or more views, the improved portion itself, disconnected from the old structure, and also in another view, so much only of the old structure as will suffice to show the connection of the invention therewith.

Correction is required.

Art Unit: 2834

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oku in view of Moritan et al.

Oku discloses a spindle motor for use in a disc drive comprising a shaft 20, a sleeve surrounding the shaft and adjacent the thrust plate 40, a counterplate 42 and supported between upraised axial arms of said sleeve (see figure 1). Also, the shaft is fixed and the sleeve and counterplate rotate relative to the shaft. Moreover, the sleeve supports a hub 18 and the counterplate and sleeve are fixed to the base 4. However, Oku does not disclose that the counterplate is welded to the sleeve.

On the other hand, Moritan et al discloses for the purpose of discharging confined air from the bearing and avoid lubricant leakage that the counter plate 22 can be welded to parts of the motor (column 2, lines 9-11).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to design a spindle motor as disclosed by Oku and to modify the invention by welding the counter plate to the motor for the purpose of discharging confined air from the bearing and avoid lubricant leakage as disclosed by Moritan et al.

Response to Arguments

Page 4

6. Applicant's arguments with respect to claims 1-8 have been considered but are

moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Julio C. Gonzalez whose telephone number is (703)

305-1563. The examiner can normally be reached on M-F (8AM-5PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Nestor Ramirez can be reached on (703) 308-1371. The fax phone

numbers for the organization where this application or proceeding is assigned are (703)

308-7722 for regular communications and (703) 305-1341 for After Final

communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is (703) 308-

0956.
